- Even and accurate heat controls; even and smooth heating provided by industrial power burner system with no flame on the drum, chaff cyclone included.
- Equipped with heavy duty direct drive steel-cooling fan.
- Industrial Gear driven operated roasting drums with speed control, with no belts or chains.
- All heavy- industrial duty motors, gear drives, UL 508-A approved industrial motor control system and motors with re-settable overloads and contactors.
- Come standard with push button lighted on-off switches, motor starters and overloads/fault protection.
- Your choice of many standard colors, trim types or stainless steel available.
- 24 volt Operator Controls for your safety.
- Cooler lifts off with two bolts for cleaning ease.
- Easy to service Roasting Fan. Manometer for accurate adjustment of air flow.
- Adjustable legs for ease of movement and cleaning.
- All Millennium Models include gear driven stirrer design.

12 Kilo power Burner "R" Series

The heat on the R-Series is supplied with a power burner (forced heat style), and our specially designed burner chamber that lowers heat loss while providing a more even roast. The R-Series produces four full-dark roasts per hour.

Touch Screen Profiler

Add \$

Profiler model comes with a PLC based 6" graphical touch screen control and profiling system. PLC system allows for manual "hands on" operation or programmable PLC controls of the

temperature, burner output, and airflow of the bean environment, for profiling the roast. You actually train the roaster by setting up the information on the “set up” screen or by roasting and letting the machine run in teach mode. PLC system reports over temperature conditions and provides a water spray when your safe temperature settings are exceeded. Profiler has cool down, turn off, and preheat modes. Model also includes over-heat indicators, electronic flame safety controls, as well as many other features. Optional integration of afterburner to PLC control is optionally available for lower fuel use.

Semi-Auto with electric door actuator Add \$

Allows the Profiler control system to open the door at the end of the roast and start the cooling mode automatically. Includes “Roast Helper” mode which when operating allows for automatic operation at the end of a manual roast the opening of the drum door and cooling of the product in the cooler.

Thermal After-Burner and Catalytic Afterburners can be provided at additional cost.
